

Pumper 2

Pumper 2 is a 1997 Freightliner FL-80 with a 300 HP Cummins Town of St. Paul Pumper. Pumper 2 responds to the in-town fires and is the second responding unit out. This truck's primary responsibility is to supply Pumper 1 with water by laying out high vol hose. Alternately this apparatus has a 5 man cab, with the pump controls located on the exterior behind the cab (making it for a cold job on the pump operator in the winter months), allowing this truck to also aid in suppression. Each seat in this truck has an SCBA built in to it, minus the driver's seat. Pumper 2 has an 800 Imp.Gal.Tank – 1050 IGPM midship pump. This truck also has a center deck gun (monitor) that is removable.
