

Rescue 1

The St. Paul 2011 Rescue unit is the first emergency vehicle to roll for all MVC's in the town and county. This unit also responds to all in and out of-town/county fires and is the second or third responding unit out. This big rig is a 330 HP Freightliner. This truck holds a total of 6 firefighters. Rescue 1 comes equipped with drop chains on the rear wheels, command tower scene light with 6 – 1000 watt output lights, 25 kilowatt PTO generator, multiple exterior receptacles, electric cord reel w/rewind, roll-out and tip-down trays, and LED lighting inside all cabinets. With the flick of a switch, the back end of this rig will also drop 4 inches to allow easier access to the rear and side cabinets.
