MILLET MINISTERIAL

Friday, April 24: "The Art of Work: Ancient Advice for a Better Life," One-Man Play by Vance Neudorf. Millet Community Hall, 7 pm. Admission is free, but a collection will be taken. Sponsored by the Millet Ministerial.

Spring is approaching soon; here are some tips from the Alberta Land Surveyors website that may be of some interest to you if you're considering building a fence.

The Importance of a Boundary Fence: "Fences serve many functions. They can be constructed for security reasons, pet or child confinement, hazard control, by-law requirements and agricultural uses. Or, fences can be simply an architectural or aesthetic improvement to your property. Fences are most often used to mark the boundaries of a property. Whenever fences are located on property boundaries they must be located properly to minimize the chance of causing legal issues that may be expensive to resolve."

Tips for locating property boundaries

The easiest way to determine boundary locations is to hire an Alberta Land Surveyor (ALS).

If you know where your property boundary markers are you can mark the property line—there are often monuments (survey markers) for other purposes, such as roadways, etc. Be absolutely certain that you are using the right survey markers (steel pins).

Remember it is illegal to disturb or remove any survey marker. Fines for tampering with boundary markers can be up to \$10,000 or jail time. (For more information, see the brochure "I just built a fence!" at www.alsa.ab.ca) Call Alberta One-Call and have underground facilities marked. You do not want to hit a gas or electrical line. Ask your neighbor to help and be involved in determining the fence location." -Alberta Land Surveyors' Assoc.

FEW GOOD TIPS.....

WINTER HEATING.....Allow the sunlight in during the day, for passive solar heating, but close the window and blinds at night

USE BAKING SODA instead of chemical cleaners in your toilet and bathtub, this will save money and reduce pollutants.

IF YOU AIN'T USING THEM, YANK THEM....Any electronic gizmo that has a clock, digital timer, power charger or standby mode is sucking energy when it is not being used! Unplug them when you not using them!

BATTLE GERMS AND MOULD....Mix up a solution of 3% hydrogen peroxide with 2 parts water in a spray bottle and use for disinfectant.

TEST YOUR TOILET....Put food colouring in your toilet. If it seeps into the toilet bowl without flushing, you have a leak!

LIFE HACKS...

When traveling, place a bar of scented soap with your dirty laundry, helps keep them smelling fresh.

Drop a battery from about 6 inches up, if it bounces more than once, it is dead or on it's way out!

Add 1 teaspoon of baking soda to the water when boiling eggs and the shells come off effortlessly!

Freeze a saturated sponge in a ziplock, best ice pack ever!

Rub walnuts on damaged wood to cover up dings.

Placing a small glass of water in the microwave when heating pizza will prevent the crust from getting chewy.

Use raw spaghetti to light those hard to reach jar candles.

Place plastic wrap around the stem of the banana's to keep them fresh for another week!
