BLACK KNOT is a disease found mostly in fruit trees & has been spotted in Millet. Please check your flowering crab apple, plum or cherry trees; look for a black bulge on the limb. Care must be taken when removing the diseased branch. The entire branch must be taken off. Once removed, your pruning tools must be BLEACHED before use on a healthy branch to avoid spreading of disease. For more info call Carol (780)216-1378
