

Alberta HUB, in collaboration with provincial staff and partner organizations in the Alberta HUB Region, has initiated an exploration of very high-speed (gigabit) Broadband opportunities, needs, benefits and strategic approaches relevant to the Alberta HUB Region and local municipalities within it.

Accessible, affordable and reliable high-speed Broadband services, provided in a coordinated and interconnected system, is fundamental to supporting economic competitiveness locally and regionally, enabling greater social connectedness and well-being of the Region's population, supporting education, health and community service delivery and promoting environmental sustainability across the Region.

High-speed Broadband services provide foundational infrastructure for community prosperity, resiliency and quality of life – not unlike roads, electricity, water and wastewater and other essential utilities that support economic activity and community life.

*“The need of high-speed Broadband services, at affordable prices, is viewed as a foundation for economic development and competitiveness across North America.”*

*“The internet facilitates the move from an industrial to a knowledge---based society, from a society Based on physical effort to One based on mental effort, and from Reliance on limited material resources dependence to virtually unlimited intangible resources”.*

The purpose of this survey is to identify the current state of Broadband and its effect on the business community in the Alberta HUB Region and ultimately, informing regional and local decision-makers about issues and options at local and Region-wide levels to strengthen the delivery and affordability of highspeed Broadband services across the region.
