

Attention Poplar Bay Residents

Council has evaluated the use of grinder pumps for the local wastewater system. It is expected that grinder pumps will be selected for our system.

This means that a few things may have changed, including the tank specifications.

If you are considering purchasing and installing a new tank, please hold off for a week or two until we can get the new specifications out to the installers. The smaller tank needed for the grinder pump could reduce your costs.

If you already have a new tank in place under the old specifications, this will still be suitable with the grinder system.

Poplar Bay will be issuing a newsletter soon that will include more information about the system changes and how they will affect you.
